

TRADE STAND POWER INFORMATION

16 amp

- Most traders will only need a 16 amp supply. This is enough for one kettle/water boiler, a fridge and power for charging mobile phones, laptops, credit/debit card machines
- The supply is 16 amp, which is a round blue plug, but we can provide converters to standard 13 amp for traders who are operating from marquees or pop-up tents.
- Traders who have mobile exhibition units will find that they often have a 16 amp connection on the outside of the unit. A 16 amp supply is enough to power items totalling 3600 watts.

32 amp

- Some traders may require a little more power, and we can provide them a 32 amp supply. This will allow you to power more than one kettle/water boiler, or perhaps one, kettle, a fridge, drinks chillers, lighting, charging for electronic devices.
- Some of the larger exhibition trailers have a 32 amp connection on the outside of the unit. A 32 amp supply is enough to power items totalling 7600 watts.

Please contact us if you need a 32 amp or 63 amp 3 phase supply. This can be provided without any issue, although the price will be more.
