

Exhibitor Risk Assessments

Sunday 19th April 2026

Risk Assessment & Fire Risk Assessment Guidance

WHY COMPLETE A RISK ASSESSMENT

1. If someone comes onto your stand and injures themselves they can look to seek compensation from you. If you've made no effort to complete a risk assessment, or have simply put NO RISK across your form, a court would likely look at this as you not having made any effort to consider the welfare of people coming onto your stand. If however you have completed a risk assessment, and even if the injury is as a result of a hazard you had not identified in that risk assessment, a court is much more likely to look favourably on you as you've shown you've considered risks on your stall and taken steps to minimise them.
2. Once you have completed a risk assessment you can use it again and again at different events, simply "tweaking" and updating it as your stand changes, expands etc. Indeed if you already operate a risk assessment for your stand, we do not require you to transfer that information onto our form, we are happy to accept a copy of that risk assessment, so long as it is relevant to the setup you will be bringing to the event
3. The Lincolnshire Agricultural Society has a duty to ensure the safety and well-being of all who attend Countryside Lincs, be they visitors, exhibitors or staff/volunteers. As such it forms part of our trade conditions that each stall holder must complete a risk assessment and submit it with their application form.

A risk assessment is an important step in protecting your workers and your business, as well as complying with the law. The Health and Safety Executive produce a useful guide to assist you in producing your risk assessments – the HSE Five Steps to Risk Assessment. A free copy can be downloaded from: [Risk assessment: Steps needed to manage risk - HSE](#)

To access the risks of your exhibitor/trade stand, please follow the five steps:

1. Identify the hazards
2. Decide who might be harmed and how
3. Evaluate the risks and decide on precautions
4. Record your findings and implement them
5. Review your assessment and update if necessary

Risk Assessments and Method Statements (RAMS):

Must be specific to the intended activities to be undertaken at the event. Any residual risks must be clearly identified, particularly those which may affect others in close proximity.

Generic risk assessments and method statements *may* be accepted, otherwise specific documentation will be required.

Construction, Set-up & Breakdown:

Where work will include erection and removal of structures, the risk assessments and method statements must include specific details of:

- A) How you will ensure that unauthorised access to the working area will be maintained during the build-up and break-down phases.
- B) If working at height is involved, how suitable access will be provided, how falls will be prevented and what rescue procedures are available.
- C) Details of what PPE (Such as Hi-Viz, safety footwear etc) will be required to be used at all times within the construction area – be mindful of your duties under the CDM 2015 regulations.

Fire Risk Assessment / Fire Certificates:

You may require a specific fire risk assessment, subsequently needing to supply fire certificates for construction materials, fabrics, drapes etc.

HAZARD

A HAZARD is anything, within reason, which could cause damage to people, property or the environment. A marquee (***gazebos or small marquees should be fit for purpose***) could blow down in high wind, or a flag pole could blow over if not properly secured for example. The hazards may include any or all of the following, but please note this is not an exhaustive list.

Please tick below the boxes that may affect you, and include these in your risk assessment

POSSIBLE HAZARDS	<input checked="" type="checkbox"/>
General access to the area	<input type="checkbox"/>
Slips and trips	<input type="checkbox"/>
Falls from height or ground level	<input type="checkbox"/>
Working at height	<input type="checkbox"/>
Manual handling	<input type="checkbox"/>
Setting up / packing down stands or other structures	<input type="checkbox"/>
Use of electrical equipment	<input type="checkbox"/>
Adverse weather conditions – excess heat, wet weather or high winds	<input type="checkbox"/>
Items on display on the stand	<input type="checkbox"/>
Steps or ramps	<input type="checkbox"/>
